

IncuSec 2nd Edition

REPORT

Date: 24th February 2018

Venue: Bill Gates Lab, HITS

The second edition dealt with web applications. A coverup of 1st edition was first given. Following that the basics of approaching or identifying a target to be hacked was discussed.

The top 10 web application vulnerabilities were discussed. A practical session on A7 Cross Site Scripting (XSS) was done, by explaining the types of XSS and how to identify each of them and test for it's presence. The 3 major types of XSS was explained and demonstrated and participants were made to do it for themselves.

The session overall highlighted the importance of gathering details of a target before attacking. Also the most common vulnerability XSS was discussed and practiced.
