IncuSec 2nd Edition revisited

REPORT

Date: 3rd March 2018   *Venue: Bill Gates Lab, HITS*

The session was planned as coverup and was an on-demand session as requested by students. A coverup of 2st edition was first given. Following that the basics of approaching or identifying a target to be hacked was discussed.

A deep practical session on A7 Cross Site Scripting (XSS) was done, by explaining the types of XSS and how to identify each of them and test for it's presence. A clear explanation and using XSS in earning money form Bug bounty was explained.

The session covered the most critical part of XSS and using them in Bug bounty program was explained. Some parts covered in the session can be found on the blog,
